

FAQBNB Application Review

Session: January 11, 2026 at 2:53 PM

Application: faqbnb-staging.up.railway.app

Version: v0.2 | Build: 55881d9 | Date: 2026-01-09

INSTRUCTIONS FOR LLM AGENT

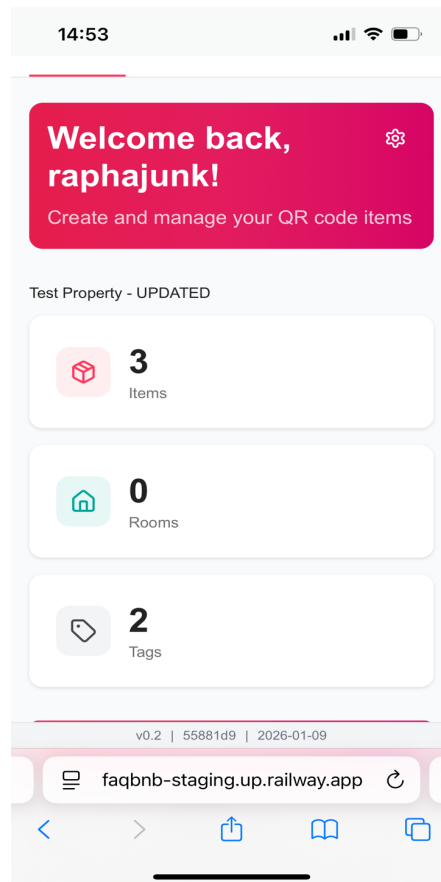

This document contains 5 change requests for the FAQBNB application.

- A) You must create an implementation plan for these changes using Agent 00.**
- B) Once done review your work to make sure you did not forget any important consideration**
- C) Construct a pipeline using Agent 00b**

REQUEST 1: Make Dashboard Cards Clickable

Screen: Dashboard / Home screen

Priority: **HIGH**

Current State

Dashboard shows summary cards with counts (3 Items, 0 Rooms, 2 Tags) but they are static and non-interactive.

Problem

Users expect to click on dashboard statistics to drill down into details. This is standard UX for dashboard interfaces.

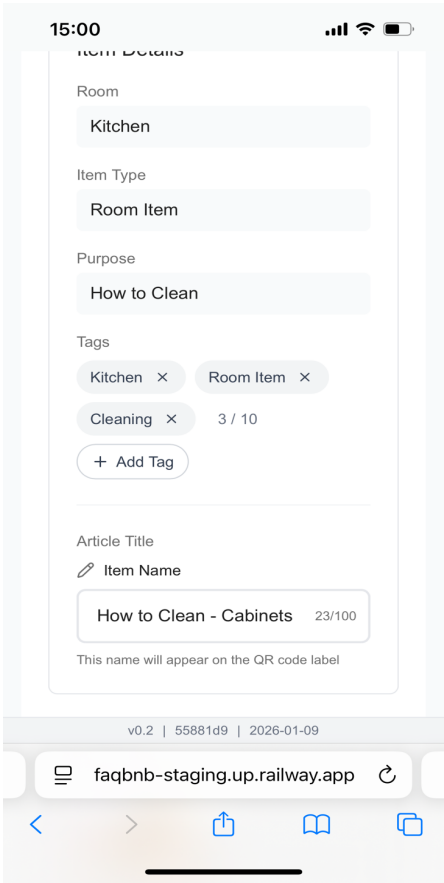

Required Change

- Click "3 Items" → Navigate to Items list
- Click "0 Rooms" → Navigate to Rooms list
- Click "2 Tags" → Navigate to Tags list

REQUEST 2: Fix Data Model - Separate Item from Article/Instructions

Screen: Step 8 - Item Details

Priority: **CRITICAL**

Current State

The UI conflates Item and Article. Shows "Article Title" as "How to Clean - Steamer" and says this will appear on the QR code label.

Problem - Data Model Misunderstanding

The application confuses the relationship between Items, Articles, and QR codes. The current implementation is incorrect.

Correct Data Model

Concept	Description	Example
Item	A physical thing. Gets ONE QR code.	Fridge, Oven, Steamer
Article	Instructions/content about an item. Multiple per item.	"How to Clean", "How to Turn Off"

Purpose	= Article Title (same thing)	"How to Clean"
QR Code	ONE per Item (not per article)	Scan "Fridge" → see all articles

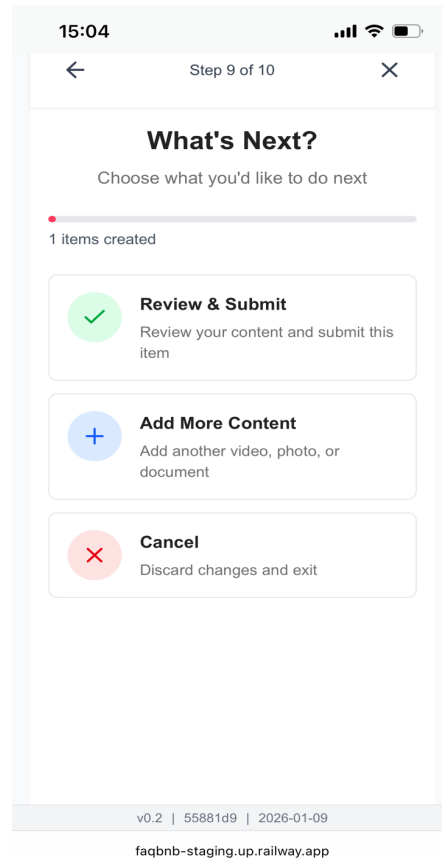

Required Changes

- **Item Name** should be just the item (e.g., "Steamer") — NOT "How to Clean - Steamer"
- **Article Title** = Purpose (e.g., "How to Clean")
- **QR Code label** shows Item Name only (e.g., "Steamer")
- When user scans QR for "Steamer," they see list of all articles: "How to Clean," "How to Turn Off," etc.

REQUEST 3: Fix "What's Next" Screen - Remove Invalid Options

Screen: Step 9 - "What's Next?"

Priority: **HIGH**

Current State

Shows "Review & Submit", "Add More Content", "Cancel" with a back arrow. Step counter shows "Step 9 of 10".

Problem

- The item has already been saved at this point
- "Cancel" makes no sense — there's nothing to cancel
- Back arrow makes no sense — can't go back after saving

Required Changes

- **REMOVE** the Cancel button
- **REMOVE** the back arrow
- This screen should be a **post-workflow menu**, not a numbered step

The 4 options should be:

1. **Edit Instructions** - Edit the instructions/article just created

2. **Add New Instructions** - Create different instructions for the same item
3. **Create New Item** - Start fresh with a different item
4. **Done** - Exit the workflow completely

REQUEST 4: Update Navigation Menu - New Structure & Mobile Labels

Screen: Top Navigation Menu (all screens)

Priority: MEDIUM

Current State

Menu has 3 items: Home, My Items, My Properties. "Home" uses a house icon which conflicts with property/home terminology.

Problem

- "Home" conflicts with property homes
- "My" prefix is unnecessary
- Takes too much space on mobile
- Missing "Instructions" menu item

Required Changes - New Menu Structure (4 items)

Desktop Label	Mobile Label	Icon
Dashboard	D/B	Dashboard/grid icon (NOT house)
Items	Items	Box/cube icon
Instructions (NEW)	Instr.	Document/list icon
Properties	Prop.	House/building icon

Key: Move house icon to Properties (makes sense for real estate). Use dashboard/grid icon for Dashboard.

REQUEST 5: Fix Workflow Step Count - Should End at Step 8

Screen: Save Item + Item Saved confirmation

Priority: **HIGH**

15:19

Laundry × Appliance ×

Cleaning × 3 / 10

+ Add Tag

Article Title

Item Name

How to Clean - Steamer 22/100

This name will appear on the QR code label

Content 1

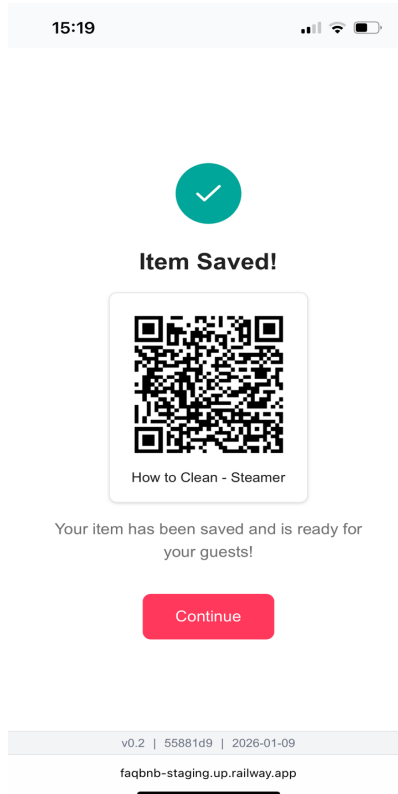

Photo

+ Add More

✓ Save Item

v0.2 | 55881d9 | 2026-01-09

faqbnb-staging.up.railway.app

Current State

Step counter shows "8 of 10" on the Save Item screen. After saving, shows "Item Saved!" with QR code, then "Continue" leads to more steps.

Problem

The "Save Item" button actually saves the item and the workflow is complete at that point. The QR code confirmation proves the item is saved. There should be no steps 9 and 10.

Required Changes

- Change step counter to "Step 8 of 8" (not 8 of 10)
- "Save Item" is the FINAL workflow step
- "Item Saved!" with QR code = END of workflow
- "Continue" button leads to post-workflow menu (from Request 3), which is NOT a numbered step

SUMMARY - AGENT 01 TICKET CREATION

Agent 01 must create 5 separate tickets:

Ticket	Description	Priority	Type
REQ-1	Make dashboard cards clickable	HIGH	UI/UX
REQ-2	Fix data model - separate Item from Article	CRITICAL	Data/Logic
REQ-3	Fix "What's Next" screen options	HIGH	UI/UX
REQ-4	Update navigation menu structure	MEDIUM	UI/UX
REQ-5	Fix workflow step count (8 of 8)	HIGH	UI/Logic

PIPELINE EXECUTION ORDER

For EACH ticket above, execute the following pipeline:

Agent 01 → Create ticket with full details from this document

Agent 02 → Analyze ticket, plan implementation approach

Agent 03 → Implement the changes in code

Agent 05 → Review implementation, test, and deploy

IMPORTANT: Process tickets in priority order: CRITICAL first, then HIGH, then MEDIUM.
