

FAQBNB Application Review

Project: CPL-FAQBNB

Session: 2026-01-11 at 14:53

Application: faqbnb-staging.up.railway.app

Version: v0.2 | Build: 55881d9

Route: [/dashboard2/](#)

PRODUCT CONTEXT

This document contains **5 items** identified during the application review session for FAQBNB, a QR code-based property management application that allows property owners to create instructional content for items in their properties.

All changes in this document are related to the [/dashboard2/](#) route.

Each item includes the current state, identified problem, and required changes. Items are prioritized based on impact to user experience and system functionality.

Priority Breakdown: **CRITICAL:** 1 | **HIGH:** 3 | **MEDIUM:** 1

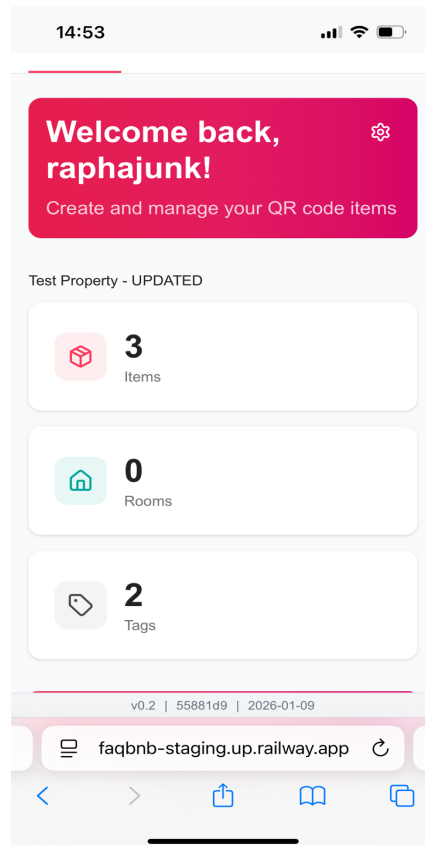

ITEM-01: Make Dashboard Cards Clickable

Priority: **HIGH**

Route:

</dashboard2/>

Screen Title: "Welcome back, raphajunk!" | Property: "Test Property - UPDATED" | Version: v0.2 | 55881d9 | 2026-01-09

Current State

Dashboard displays three summary cards with counts (3 Items, 0 Rooms, 2 Tags). Each card shows an icon and count but they are static and non-interactive. Tapping on the cards produces no response.

Problem

Users expect to click on dashboard statistics to drill down into details. This is standard UX for dashboard interfaces. The lack of interactivity creates a dead-end experience and forces users to navigate via other means.

Required Changes

- Click "3 Items" card → Navigate to Items list screen

- Click "0 Rooms" card → Navigate to Rooms list screen
- Click "2 Tags" card → Navigate to Tags list screen
- Add visual affordance (e.g., subtle arrow or tap highlight) to indicate interactivity

ITEM-02: Fix Data Model - Separate Item from Article/Instructions

Priority: **CRITICAL**

Route:

</dashboard2/>

Screen Title: "Item Details" | Fields visible: Room (Kitchen), Item Type (Room Item), Purpose (How to Clean), Tags (Kitchen, Room Item, Cleaning - 3/10), Article Title (How to Clean - Cabinets 23/100)

15:00

Item Details

Room

Kitchen

Item Type

Room Item

Purpose

How to Clean

Tags

Kitchen × Room Item ×

Cleaning × 3 / 10

+ Add Tag

Article Title

Item Name

How to Clean - Cabinets 23/100

This name will appear on the QR code label

v0.2 | 55881d9 | 2026-01-09

faqbnb-staging.up.railway.app

Current State

The screen shows "Article Title" field populated with "How to Clean - Cabinets" and indicates "This name will appear on the QR code label". The UI conflates the concepts of Item and Article, treating them as a single entity.

Problem - Data Model Misunderstanding

The application confuses the relationship between Items, Articles, and QR codes. This fundamental data model error affects how content is organized and accessed.

Correct Data Model

Concept	Description	Example
Item	A physical thing. Gets ONE QR code.	Fridge, Oven, Cabinets
Article	Instructions/content about an item. Multiple per item.	"How to Clean", "How to Turn Off"
Purpose	= Article Title (same thing)	"How to Clean"
QR Code	ONE per Item (not per article)	Scan "Cabinets" → see all articles

Required Changes

- **Item Name** field should contain only the item (e.g., "Cabinets") — NOT "How to Clean - Cabinets"
- **Article Title** should equal the Purpose selected earlier (e.g., "How to Clean")
- **QR Code label** must show Item Name only (e.g., "Cabinets")
- When user scans QR for "Cabinets," app displays list of all articles for that item
- Update database schema to enforce one-to-many relationship: Item → Articles

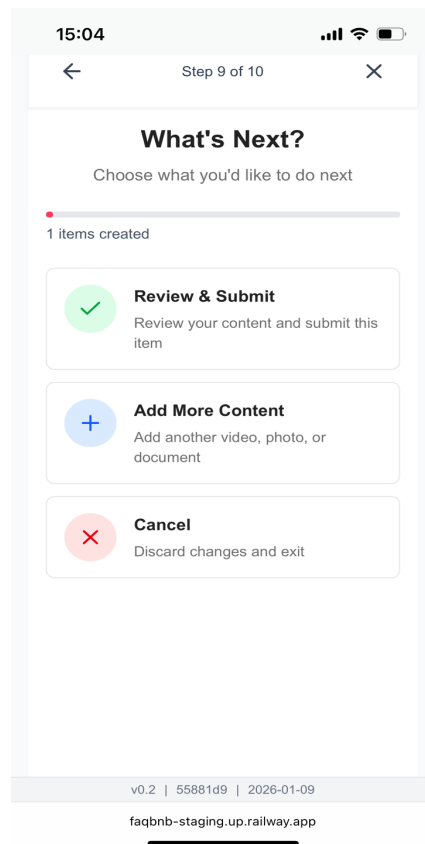

ITEM-03: Fix "What's Next" Screen - Remove Invalid Options

Priority: **HIGH**

Route:

</dashboard2/>

Header: ← Step 9 of 10 × | Screen Title: "What's Next?" | Subtitle: "Choose what you'd like to do next" | Status: "1 items created" | Buttons: Review & Submit, Add More Content, Cancel

Current State

Screen displays three options: "Review & Submit" (with checkmark icon), "Add More Content" (with + icon), and "Cancel" (with × icon, description: "Discard changes and exit"). Header shows back arrow (←), "Step 9 of 10", and close button (×).

Problem

- The item has already been saved at this point — "Cancel" with "Discard changes and exit" is misleading
- Back arrow is confusing — user cannot undo a saved item by going back

- Screen is numbered as Step 9 but it's actually a post-save decision point, not a workflow step

Required Changes

- **REMOVE** the Cancel button — nothing to discard after save
- **REMOVE** the back arrow from header
- **REMOVE** step counter — this is a post-workflow menu, not a numbered step

Replace with these 4 clear options:

- 1 **Edit Instructions** — Edit the article/instructions just created
- 2 **Add New Instructions** — Create different instructions for the same item
- 3 **Create New Item** — Start fresh workflow with a different item
- 4 **Done** — Exit the workflow and return to Dashboard

ITEM-04: Update Navigation Menu - New Structure & Mobile Labels

Priority: **MEDIUM**

Route:

</dashboard2/>

Component: Top navigation bar visible across all screens

Current State

Top navigation menu contains items including "Home" with a house icon. Labels include "My" prefix. On mobile, full labels consume horizontal space.

Problem

- "Home" label with house icon conflicts with property/home terminology in a real estate app
- "My" prefix is redundant — all items belong to the logged-in user
- Full labels take too much horizontal space on mobile devices
- Missing "Instructions" menu item — no direct access to view all instructions/articles

Required Changes - New Menu Structure (4 items)

Desktop Label	Mobile Label	Icon
Dashboard	D/B	Dashboard/grid icon (NOT house)
Items	Items	Box/cube icon
Instructions (NEW)	Instr.	Document/list icon
Properties	Prop.	House/building icon

Note: Move house icon to "Properties" where it semantically belongs. Use dashboard/grid icon for "Dashboard" to avoid confusion.

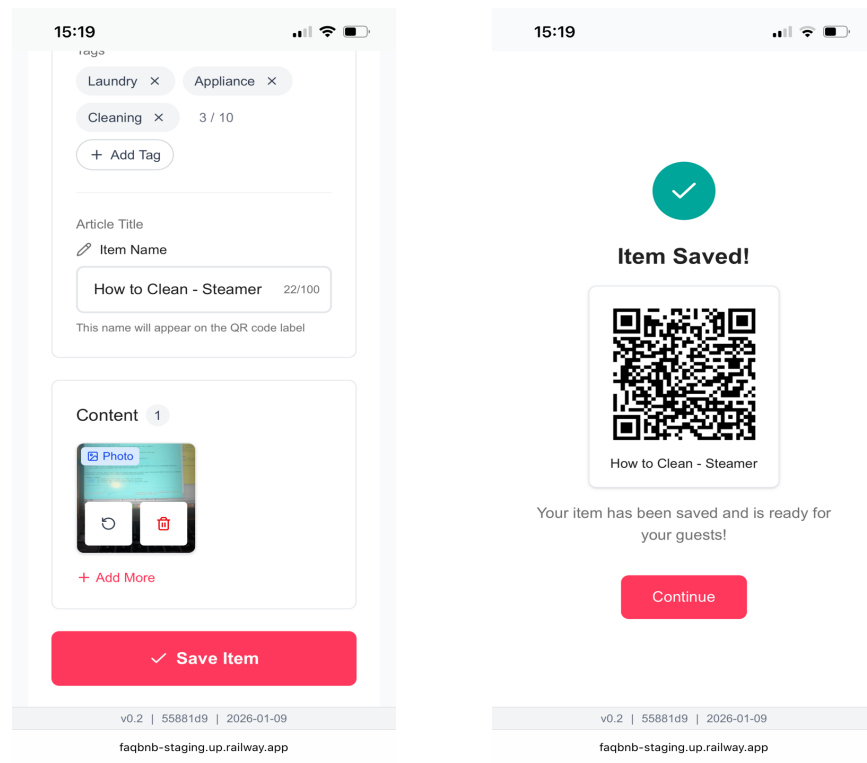

ITEM-05: Fix Workflow Step Count - Should End at Step 8

Priority: **HIGH**

Route:

</dashboard2/>

Screen 1: Tags (Laundry, Appliance, Cleaning 3/10), Article Title "How to Clean - Steamer" 22/100, Content (1 Photo), "Save Item" button | Screen 2: "Item Saved!" with QR code labeled "How to Clean - Steamer", "Continue" button

Left: Save Item screen | Right: Item Saved confirmation with QR code

Current State

After tapping "Save Item", the app shows "Item Saved!" confirmation with a generated QR code labeled "How to Clean - Steamer". Message states: "Your item has been saved and is ready for your guests!" A pink "Continue" button appears below.

Problem

The "Save Item" button actually saves the item to the database — the workflow is complete. The QR code confirmation proves the item is saved. The step counter (visible in other screens as "Step X of 10") implies 10 steps exist, but the workflow should end at step 8.

Required Changes

- Change step counter to "Step 8 of 8" (not "8 of 10")
- "Save Item" is the FINAL workflow step — label should reflect finality
- "Item Saved!" with QR code = END of workflow (no step counter needed)
- "Continue" button leads to post-workflow menu (see ITEM-03), which is NOT a numbered step
- Consider renaming "Continue" to "Done" or "What's Next" for clarity

CHANGE REQUEST SUMMARY

Route: </dashboard2/>

Item	Description	Priority	Type
ITEM-01	Make dashboard cards clickable	HIGH	UI/UX
ITEM-02	Fix data model - separate Item from Article	CRITICAL	Data/Logic
ITEM-03	Fix "What's Next" screen options	HIGH	UI/UX
ITEM-04	Update navigation menu structure	MEDIUM	Navigation
ITEM-05	Fix workflow step count (8 of 8)	HIGH	UI/Logic
